1. Introduction

- don't feel safe in your own home, you're not going to be able to enjoy living Background: Safety is a top concern when moving to a new area. If you
- Problem: This project aims to select the safest borough in London based on the total crimes, explore the neighborhoods of that borough to find the 10 most common venues in each neighborhood and finally cluster the neighborhoods using k-mean clustering.
- Interest: Expats who are considering to relocate to London will be interested to identify the safest borough in London and explore its neighborhoods and common venues around each neighborhood.

2. Data Acquisition and Cleaning

Data Acquisition: The data acquired for this project is a combination of data from

three sources:

 The first data source of the project uses a London crime data that shows the crime per borough in London. · The second source of data is scraped from a wikipedia page that contains the list of London boroughs. This page contains additional information about the boroughs.

The third data source is the list of Neighborhoods in the Royal Borough of Kingston upon Thames as found on the wikipedia page. Data Cleaning: The data cleaning process for each of the three sources of data are done separately.

- selected. The major categories of crime are pivoted to get the total crimes per the boroughs From the London crime data, the crimes during the most recent year (2016) are only for each major category.
- The second data is scraped from a wikipedia page using the Beautiful Soup library in python. Using this library we can extract the data in the tabular format as shown in the website.
- The two data sets are merged on the Borough names to form a new data set. The purpose of this data set is to visualize the crime rates in each borough and identify the borough with the east crimes recorded during the year 2016.
- rate. The third data set is created, with the names of the neighborhoods and the name of the After visualizing the crime in each borough we can find the borough with the lowest crime borough with the latitude and longitude obtained using Google Maps API geocoding.
- The new data set is used to generate the 10 most common venues for each neighborhood using the Foursquare API, finally using k means clustering algorithm to cluster similar neighborhoods together.

3. Methodology

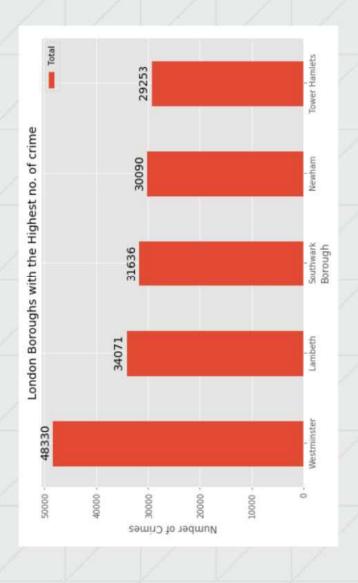

Exploratory Data Analysis

Statistical summary of crimes

| rson Total | 00000 33.000000 | 8485 22306.696970 | 1551 8828.228749 | 25.000000 178.000000 | 5936.000000 16903.000000 | 7409.000000 22730.000000 | 00000 22124 000000 |
|--|-----------------|-------------------------|------------------|----------------------|--------------------------|--------------------------|-------------------------|
| Robbery Theft and Handling Violence Against the Person | 33.00000 | 7041.848485 | 2513,601551 | 25.00 | 5936.00 | 7409.00 | 8832.00000 |
| Theft and Handling | 33.000000 | 8913.121212 | 4620.565054 | 129.000000 | 5919.000000 | 8925.000000 | 10789.000000 |
| Robbery | 33.000000 | 682,666667 | 441.425366 | 4.000000 | 377.000000 | 599,000000 | 936.000000 |
| Drugs Other Notifiable Offences | 33.00000 | 479.060606 | 223.298698 | 6.000000 | 378.000000 | 490,000000 | 551.000000 |

| Burglary | 33.000000 | 2069.242424 | 737.448644 | 2.000000 | 1531.000000 | 2071.000000 | 2631.000000 |
| | count | mean | std | min | 25% | %09 | 75% |

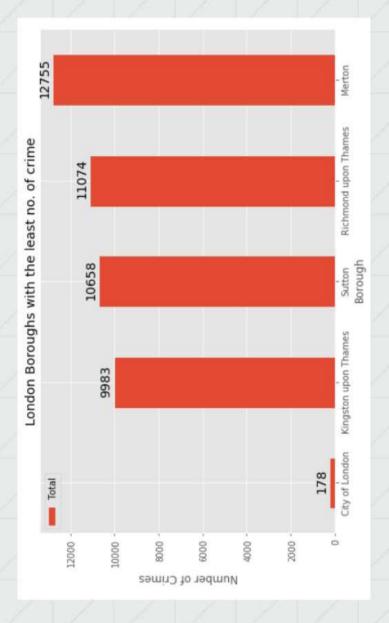

The count for each of the major categories of crime returns the value 33 which is the number of London boroughs. 'Theft and Handling' is the highest reported crime during the year 2016 followed by 'Violence against the person', 'Criminal damage'. The lowest recorded crimes are 'Drugs', 'Robbery' and 'Other Notifiable offenses'

Westminster has the highest crimes recorded followed by Lambeth, Southwark, Newham and Tower Hamlets. Westminster has a significantly higher crime rate than the other 4 boroughs. Comparing five boroughs with the highest crime rate during the year 2016 it is evident that

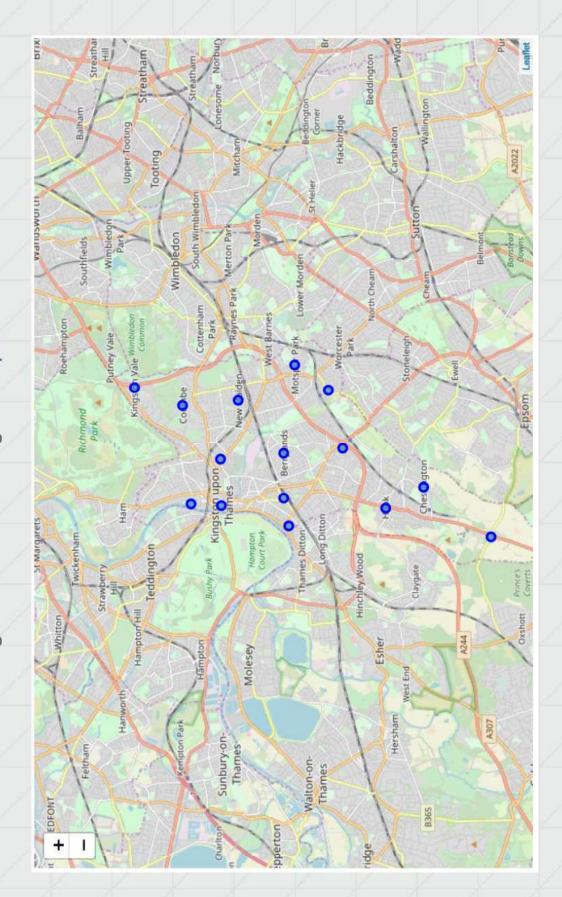

Boroughs with the lowest crime rates

Comparing five boroughs with the lowest crime rate during the year 2016, City of London has the lowest recorded crimes followed by Kingston upon Thames, Sutton, Richmond upon Thames and Merton.

- City of London has a significantly lower crime rate because it i is the 33rd principal division of Greater London but it is not a London borough. It has an area of 1.12 square miles and a population of 7000 as of 2013 which suggests that it is a small area.
- · We will consider the next borough with the lowest crime rate as the safest borough in London which is Kingston upon Thames.

Neighborhoods in Kingston upon Thames

There are 15 neighborhoods in the royal borough of Kingston upon Thames, they are visualised on a map using folium on python.

Modelling

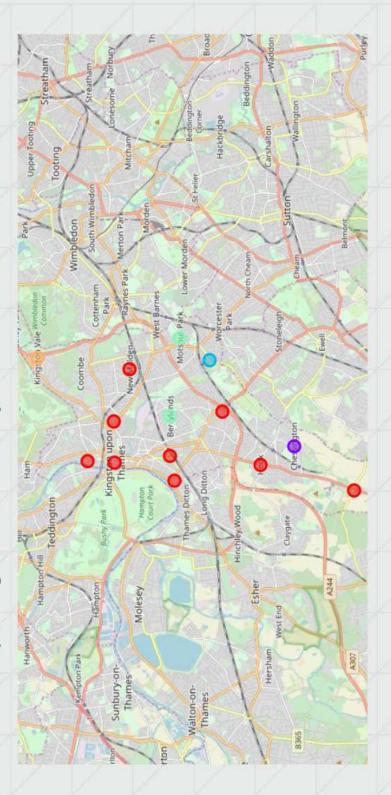

Using the final data set containing the neighborhoods in Kingston upon Thames along with the latitude and longitude, we can find all the venues within a 500 meter radius of each neighborhood by connecting to the Foursquare API.

| | Neighborhood | Neighborhood Latitude | Neighborhood Neighborhood Latitude Neighborhood Longitude | | Venue Latitude | Venue Venue Latitude Venue Longitude | Venue Category |
|---|--------------|-----------------------|---|--|----------------|--------------------------------------|--------------------------------|
| - | 9 Berrylands | 51.393781 | -0.284802 | -0.284802 Surbiton Racket & Fitness Club | 51.392676 | -0.290224 | -0.290224 Gym / Fitness Center |
| - | 1 Berrylands | 51.393781 | -0.284802 | Alexandra Park | 51.394230 | -0.281206 | Park |
| | 2 Berrylands | 51.393781 | -0.284802 | K2 Bus Stop | 51.392302 | -0.281534 | Bus Stop |
| | 3 Berrylands | 51.393781 | -0.284802 | Cafe Rosa | 51.390175 | -0.282490 | Café |
| - | t Canbury | 51.417499 | -0.305553 | The Boater's Inn | 51.418546 | -0.305915 | Pub |

- Neighborhood and the mean of the venues are calculated, finally the 10 common venues One hot encoding is done on the venues data. The Venues data is then grouped by the are calculated for each of the neighborhoods.
- To help people find similar neighborhoods in the safest borough we will be clustering similar neighborhoods using K - means clustering which is a form of unsupervised machine learning algorithm that clusters data based on predefined cluster size.
- We will use a cluster size of 5 for this project that will cluster the 15 neighborhoods into 5 similar venues together so that people can shortlist the area of their interests based on clusters. The reason to conduct a K- means clustering is to cluster neighborhoods with the venues/amenities around each neighborhood.

4. Results

After running the K-means clustering we can access each cluster created to see which neighborhoods were assigned to each of the five clusters. Visualizing the clustered neighborhoods on a map using the folium library.

neighborhood falls in the red cluster which is the first cluster. Three neighborhoods have Each cluster is color coded for the ease of presentation, we can see that majority of the their own cluster (Blue, Purple and Yellow), these are clusters two three and five. The green cluster consists of two neighborhoods which is the 4th cluster.

Grocery shops, Bars, Restaurants, Furniture shops, and Department stores. The fifth cluster has one neighborhood which consists of Venues such as

5. Discussion

- The aim of this project is to help people who want to relocate to the safest borough in London, expats can chose the neighborhoods to which they want to relocate based on the most common venues in it.
- connectivity and public transportation we can see that Clusters 3 and 4 For example if a person is looking for a neighborhood with good have Train stations and Bus stops as the most common venues.
- If a person is looking for a neighborhood with stores and restaurants in a close proximity then the neighborhoods in the first cluster is suitable.
- For a family I feel that the neighborhoods in Cluster 4 are more suitable dues to the common venues in that cluster, these neighborhoods have Restaurants, Electronics Stores and Soccer fields which is ideal for a common venues such as Parks, Gym/Fitness centers, Bus Stops,
- The preference of venues may vary from person to person, they can select a neighborhood based on ones priorities.

6.Conclusion

- This project helps a person get a better understanding of the neighborhoods with respect to the most common venues in technology to stay one step ahead i.e. finding out more that neighborhood. It is always helpful to make use of about places before moving into a neighborhood.
- We have just taken safety as a primary concern to shortlist areas into consideration to shortlist the borough, such as includes taking other factors such as cost of living in the the safest borough of London. The future of this project filtering areas based on a predefined budget.
